Hi Guys,

SMS support was added in Switchfin.

In order to use it please compile Switchfin trunk for IP02/IP04/IP08 target with GSM1 support. You need to have GSM1 module plugged in your PBX

Now you will be able to check if new short message is available using the following syntax:

```
/bin/gsm-sms /dev/dahdi/wcgsm smscount
```

, get the message using the syntax

```
/bin/gsm-sms /dev/dahdi/wcgsm smsget
```

If you need to send a message just type

```
/bin/gsm-sms /dev/dahdi/wcgsm smssend number "Text of the message"
```

Comments are welcome. Cheers!
